

Proposal for a name of the celestial body # 15760 - 1992 QB1

We suggest the name “**Kether**”

Reasoning:

This celestial body is still without name since its discovery. This is noteworthy to us, as its existence was the first evidence of the kuiperbelt itself. Consequently it opened up the discovery of a new zone in our solar system.

Especially the astrophysikal anticipation, the kuiperbeltobjects providing knowledge about the materiell composition of the cosmic substance at its very beginning because of their position in the solar system, traces the way back to the idea of the creation of all being.

This goes along with the agreement to name all objects in this zone after worldwide legends of creation, like Quaoar, Sedna or the early vedic Varuna.

This object, which has been detected as the first of its kind, seems appropriate described to us with the the name “**Kether**” of the quabbalistic Tree-of-Life, which describes the materialisation of a creation out of galactic nebulae of cosmic dust, before these condense to stars. The created light after the sound of the Big Bang.

The Tree-of-Life is a symbolic representation of the relationships believed to exist between the most abstract Divinity and the concrete humanity. A sort of family Tree linking God and mankind together with other Beings as a complete conscious creation.

Therefore Kether is the thought of creation in itself, before any specific kind of worldview or defined religion manifests out of it. This looks appropriate for 1992 QB1 to us.
